

Figure 1 is a line graph showing the daily maximum temperature (solid line) and minimum temperature (dashed line) in the study area from September 26 to October 12, 2019. The y-axis represents temperature in degrees Celsius, ranging from 12 to 24. The x-axis represents the day. A vertical line marks the start of the study on September 27. Red dots indicate the dates when the temperature was 22°C or higher.

Date	Maximum Temperature (°C)	Minimum Temperature (°C)
Sep 26	22.0	22.0
Sep 27	22.0	22.0
Sep 28	22.5	21.5
Sep 29	23.0	21.5
Sep 30	24.0	21.5
Oct 01	22.5	20.5
Oct 02	22.5	20.5
Oct 03	22.5	20.5
Oct 04	22.5	20.5
Oct 05	21.5	19.0
Oct 06	20.5	18.0
Oct 07	19.5	17.0
Oct 08	18.5	16.0
Oct 09	18.0	15.0
Oct 10	17.5	14.5
Oct 11	17.0	14.0
Oct 12	17.0	14.0

Figure 1 is a line graph showing the daily number of cases (Y-axis, 12 to 24) versus the day (X-axis, Sep 26 to Oct 11). The graph displays a solid black line representing the observed data, a dashed black line representing the model fit, and a vertical line at Sep 26 indicating the start of the model fit. Red dots mark the daily data points. The observed data shows a peak around Sep 26 and a subsequent decline, while the model fit shows a peak around Sep 28 and a subsequent decline.

Figure 1 is a line graph showing the daily number of new COVID-19 cases in the United States from September 26 to October 12, 2020. The y-axis represents the number of cases, ranging from 12 to 24. The x-axis represents the day, with labels for Sep 26, Oct 01, Oct 06, and Oct 11. A solid black line represents the daily new cases, which starts at approximately 12.5 on Sep 26, peaks at about 12.8 on Sep 27, and then fluctuates slightly around 12.5. A solid red line represents the estimated daily new cases, which follows a similar trend but is slightly lower than the black line. A dashed black line represents the 95% confidence interval, which is wider than the red line. A vertical black line is drawn at Sep 27, indicating the date when the CDC first reported the daily new cases.
